

365 Data Science SQL Basics – Topic 4.1: The UPDATE Statement & SET Clauses

Exhaustive Notes on Modifying Attributes with UPDATE and Conditional WHERE Filtering

1. The UPDATE Statement

The `UPDATE` statement modifies existing attribute values of table records.

```
UPDATE employees  
SET first_name = 'Stella', last_name = 'Johnson'  
WHERE emp_no = 10001;
```

SQL UPDATE Statement & TCL Transaction Control

2. Topic 4.1 Viva Q&A

1. Q: Why is the WHERE clause crucial in an UPDATE statement? A: Without `WHERE`, every single record in the entire table will be updated!
