

365 Data Science SQL Basics – Topic 4.2: TCL COMMIT and ROLLBACK

Exhaustive Notes on Transaction Management, Autocommit, COMMIT & ROLLBACK Operations

1. Transaction Control Language (TCL)

• `COMMIT`: Permanently saves transaction updates to physical disk storage. • `ROLLBACK`: Undoes uncommitted changes and restores previous safe state.

2. Topic 4.2 Viva Q&A

1. Q: Can a COMMITTED transaction be rolled back? A: No! Once `COMMIT` executes, changes are permanently written to disk.
