

Week 8 Daily Diary Guide (13th July - 18th July 2026)

13th July 2026

Learned Python Dunder Methods, Inheritance, Access Specifiers, and their implementation.

Practiced inheritance programs and strengthened OOP concepts.

14th July 2026

Studied JavaScript DOM methods, DOM navigation, and Browser Object Model (BOM).

Learned Python Polymorphism, Method Overriding, and File Handling.

15th July 2026

Learned JavaScript BOM methods and started React JS fundamentals.

Studied Python File Operations including reading, writing, appending, and file methods.

16th July 2026

Completed JavaScript and learned React setup, Babel, workflow, and Flexbox.

Studied Python Exception Handling and exception blocks.

17th July 2026

Learned React DOM, Virtual DOM, ES6 Arrow Functions, and React programs.

Studied Python Packages, installation commands, and package creation.

18th July 2026

Developed React programs using Array Methods and solved assignments.

Learned Python Regular Expressions (Regex) through practical examples.

Weekly Summary

During Week 8, advanced Python Object-Oriented Programming concepts were completed while the training transitioned from JavaScript to React JS. The week covered DOM manipulation, Browser Object Model, React fundamentals, ES6 features, components, file handling, exception handling, packages, and regular expressions through lectures and practical sessions. Regular assignments and coding exercises strengthened programming, frontend development, and problem-solving skills.
