

Week 7 Daily Diary Guide (6th July - 11th July 2026)

6th July 2026

Learned JavaScript loops, arrays, array methods, and Python recursive functions.

Completed practical assignments on JavaScript concepts.

7th July 2026

Studied JavaScript String Methods and Python Lambda Functions, variable scope, and number system conversion.

Solved and submitted JavaScript assignments.

8th July 2026

Completed JavaScript String Methods and learned JavaScript Mouse Events.

Studied Python Math and Date-Time modules with practical exercises.

9th July 2026

Learned Keyboard Events, `addEventListener()`, and JavaScript Functions.

Studied Python Calendar and User-Defined Modules with assignment practice.

10th July 2026

Learned JavaScript Objects, Date Object methods, and Dark/Light Mode implementation.

Started Python OOP concepts including Classes, Objects, Constructors, and the `self` keyword.

11th July 2026

Internship holiday.

Utilized the day for self-study, revision, and project practice.

Weekly Summary

During Week 7, advanced JavaScript concepts such as arrays, string methods, events, functions, objects, and the Date Object were learned through theory and practical sessions. Python topics included recursive functions, lambda functions, modules, and the fundamentals of Object-Oriented Programming. Practical assignments throughout the week strengthened programming knowledge, logical thinking, and software development skills.
