

Displaying Images

Images are displayed in a web page using the `img` tag. The syntax is:

```

```

You can link to images on your own server or to any image on the web if you know the URL. To give a specific example I have obtained a link to a picture of the actress Selma Hayek. We can display the image in our web page as follows:

```
<body>
<h1>Selma Hayek!</h1>
<br>
<br>

<br>
<br>
</body>
```

If the image doesn't render, the text "Selma Hayek Not Here" will be displayed in its place. Here is how the web page looks:

Selma Hayek!

To see how the alt attribute works, you can copy and paste from the preview in Kompozer to a text document, and you will see:

Selma Hayek!

Selma Hayek Not Here

You can put other tags around the image to improve the appearance of your web page. For example, if we wanted to center the image, we would write:

```
<body>
```

```
<h1>Selma Hayek!</h1>
```

```
<br>
```

```
<br>
```

```
<center>
```

```

```

```
</center>
```

```
<br>
```

```
<br>
```

```
</body>
```

```
</html>
```
