

Fixed Attachments

In this lesson we'll learn to fix an element on the page. In other words when you scroll the page, the element will remain in place while the rest of the page scrolls past. We will use the web page from the previous lesson and leave the flower in place.

Its actually pretty simple. We only need to change the CSS for the body tag, specifying the value of the background-attachment attribute.

Change your CSS to:

```
body{  
  margins-left: 200px;  
  background: #5d9ab2 url("flower.jpg") no-repeat top left;  
  background-attachment: fixed;  
}
```

That's all there is to it! Save your file and load in the browser again and you'll find that the flower stays in the upper left corner of the page. Add a large amount of text to your page to test the scrolling.
